

Good Day,I have been a subscriber of XM since May 2002 - the key word is subscriber. I was growing very frustrated with the commercial radio stations in the Boston area and needed an alternative. I looked into other options and decided that XM fit my needs better than their competitors. XM is continually looking for ways to improve their service and I appreciate all of their efforts. I do not agree with the legislation (HR 4026) that is being considered. I wonder what is motivating the NAB??? This is a service which I pay for have enjoyed for over two years. The new features of weather and traffic add to the product which I have purchased. I am strongly opposed to any further consideration of HR 4026.
